Main page

Selecting Tables pane

Table x:

Table y: on: =

Table Z: on: =

OnClick should open a join line with the fields of table X

OnChange should load <fields of table Y>

Remove the given join

This could be either table X or Y depending on wich of the "join Table" buttons above have been pressed

Adding filters panel

On click should span one of the next lines

Tables Previously selected

Remove the given filter

= ; < ; > ; => ; =< ; !=

Results per Page:

the client demanded that we should exports tables to XLS,XML, TXT Ou best guest is that we can get an structred

That would return the query that would be run to generate the table (without the offset)

Table

As Seen on
<http://www.scriptcase.com.br/exemplos-scriptcase/relatorios-graficos-php/consulta-busca-dinamica>.

Dont worry about that, we don't need this

[1 to 15 of 91]

Let then define the order by clause

Every TR should have a class definition and a set of tags with the values queried such as :
<TR class=AutoGeneratedTR table_fieldX= xxx table_fieldy= yyy ...>
